

Super T Series® Eradicator Plus™ Upgrade Kits

ERADICATOR PLUS

Treating solids-laden wastewater is a process that is constantly changing. Whether your application includes non-woven flushable wipes, trash bags, hair, industrial by-products, agricultural waste or any other organic solids, eliminating pesky clogs is key to maximizing uptime and saving you money.

Gorman-Rupp's *NEW* Eradicator Plus™ solids-handling technology is based on the same principles of the Eradicator® Solids Management System. This new solids reduction technology is ideal when cutting and tearing of the debris entering a pump is required. The Eradicator Plus is the most aggressive addition to the Super T Series® product lineup. It is available in 3", 4" and 6" upgrade kits for existing Super T Series and Super T Series pumps with the Eradicator Solids Management System. Eradicator Plus' wear components are fitted with G-R Hard Iron (400 Bhn).

The Eradicator Plus upgrade is available in two arrangements – one for basic Super T Series pump models, and one for Super T Series pumps equipped with the Eradicator Solids Management System.

Super T Series basic pump upgrades will require a complete rotating assembly and a back cover kit.

Eradicator Plus upgrades to include the following:

- A complete rotating assembly with heavy-duty, continuous-vane impeller and upgraded stainless steel, load-bearing shaft.
- A complete back cover assembly with an innovative and patented lightweight inspection cover allowing easy access to the impeller, a back cover plate incorporating an obstruction-free flow path, an extra-thick and replaceable wearplate with notches and grooves in combination with an oversized lacerating tooth (currently installed Eradicator models will only require the new extra-thick wearplate for changeover).

The Eradicator Plus can be installed on existing 3", 4" or 6" Super T Series pumps in the field. Gorman-Rupp's upgrade kits include everything you will need to put the best self-cleaning, solids-handling pump technology to work for you!

For the most aggressive applications and more effective solids management, Eradicator Plus™ kits are available for Super T Series® pump models currently installed in the field.

Super T Series[®] Eradicator Plus[™] Upgrade Kits

KIT COMPONENTS

The back cover kit includes the complete back cover assembly with easily removable lightweight inspection cover, back cover plate with obstruction free flow path and extra-thick wearplate* with notches, grooves and oversized lacerating tooth. The rotating assembly kit includes the complete rotating assembly with heavy-duty, continuous-vane impeller and upgraded stainless steel shaft.
